

Aira

Jira for the AI era.

Smarter planning. Faster execution. Powered by AI.

Brand Guidelines · v1.0 · 21 September 2026

Task #122 · design-brand / rebrand-jira-to-aira-for-project

Product: Bridza → Aira (erluxman) · Source of truth for engineering, marketing and design.

Contents

1. Brand at a glance
2. Positioning
3. Voice & messaging
4. Logo system
5. Colour
6. Typography
7. UI components & tokens
8. Iconography & illustration
9. Applications: app icon, product UI, landing page
10. Landing page copy (ready to ship)
11. Asset index & file paths
12. Legal notes

How to use this document

Everything on the reference brand board (`reference/aira-brand-board.png`) has been transcribed into exact values here: hex codes, typefaces, component styles, logo variants. Engineering should treat section 10 (copy) and section 11 (paths) as the spec for the landing-page rebrand ticket. Design should treat sections 4 to 9 as the visual identity brief.

Status of the pipeline. Stage 1 (positioning) is done and is the basis of sections 2 and 3. Stage 2 (voice) is running; when `voice.md` is approved it supersedes section 3. Stage 3 (visual brief) will point at this document and the assets under `brand/` .

Brand at a glance

NAME

Aira (pronounced *AIR-uh*). Reads as "AI" + "era", and as "air": light, clear, nothing hidden.

CATEGORY

Project management for work done by AI agents. Framed inside Jira's category, owning one sub-segment.

FORMER NAME

Bridza. The rename is complete for brand purposes; internal identifiers (repo, `.bridza/` folder, branch prefix) are unchanged until a separate migration.

PROMISE

Aira: project management for the AI era. Agents do the work in small git-backed stages. You approve every handoff.

TAGLINE SET

Frame: Jira for the AI era.

Marketing line: Smarter planning. Faster execution. Powered by AI.

Hero line: From ideas to impact.

Product line: Small stages. Real gates. Git as truth.

Rhythm: Plan · Track · Ship

Personality in five words

Precise

Grounded

Quietly confident

Craft-first

Honest about control

Aira is the calm reviewer's tool, not the hype-driven agent. It shows the record instead of claiming the result.

Positioning

Method: April Dunford, *Obviously Awesome*. Full document: `brand-positioning/outputs/positioning.md` .

The category sentence

Aira is project management for the AI era: a board where AI agents do the work in small, git-backed stages and a human approves each handoff.

Competitive alternatives and the gap

Alternative	Where it breaks
Jira / Linear / Asana	The assignee is a human. No first-class way to hand a ticket to an agent, gate its output, or attribute cost per step.
AI coding agents run by hand	One prompt, one 20-file diff. No stages, no per-step review, no record.
Cloud agent platforms	Code leaves the machine. You review the end result, not each step.
AI workflow builders	Built for API pipelines. No git, no diff review, no human gate by default.
Docs + chat	Zero provenance, zero reuse.

The gap: everything is either a tracker that doesn't do the work, or an agent that does the work but can't be tracked, gated, or trusted step by step.

Unique attributes (the six that sell)

Stages are pure functions
Input is only the previous stage's outputs. One small diff per review.

Git is the database
Every task is a branch and a worktree. The timeline is the history.

Human gate by default
Supervised until you flip Automate. Failures halt even automated stages.

Per-stage attribution
Time, agent, model and cost measured per stage. The bottleneck is visible.

Bring your own AI CLI
Claude Code, opencode, anything on PATH. Swap models without rewiring.

Local-first
The desktop app is the bridge. Code never leaves the machine.

Best-fit customer

Primary: the solo builder (22 to 45) who already runs AI agents every day, keeps everything in git, and has been burned by an unreviewable mega-diff. **Secondary:** technical teams of 2 to 10 where the agent is a teammate. **Not a fit:** enterprise PMOs, non-technical teams without a repo, anyone wanting fully autonomous agents with no review.

Voice & messaging

Tone anchor: **a senior reviewer who has read the diff**. Short sentences. Nouns from git and boards. This section is the working draft; the approved `brand-voice/outputs/voice.md` supersedes it.

DO

- Say what the product records: "one diff per stage", "every run commits", "you approve each handoff".
- Use exact product nouns: task, stage, gate, artifact, branch, run, pipeline.
- Lead with the customer's problem, then the plan: pipeline → stage → gate → ship.
- Name Jira once, as a frame ("Jira for the AI era"), then move on to what is ours.
- Keep automation honest: "Automate is a switch you flip per stage."

DON'T

- "Revolutionary", "magic", "10x", "autonomous" without a gate in the same sentence.
- Imply the AI ships releases on its own.
- Feature-parity language against Jira (integrations, permissions, SSO). We don't fight there.
- Exclamation marks, emoji in product copy, hype adjectives.
- Long paragraphs. If a sentence has two ideas, split it.

Messaging hierarchy

Level	Copy	Where
Frame (eyebrow)	Jira for the AI era	Under the wordmark, hero eyebrow, social bios
Hero headline	From ideas to impact.	Landing hero H1 ("impact" in gradient)
Alt headline	Project management for the AI era.	Download page, App Store style listings
Subhead / elevator pitch	Aira is project management for the AI era. Agents do the work in small, git-backed stages. You approve every handoff.	Hero paragraph, README intro, meta description
Marketing triplet	Smarter planning. Faster execution. Powered by AI.	Brand board, ads, OG image
Rhythm	Plan · Track · Ship	Hero footer, section labels, nav
Product line	Small stages. Real gates. Git as truth.	In-app onboarding, empty states
Proof points	One small diff per stage · Every run commits to a task branch · Human gate by default · Cost and time per stage · Runs Claude Code, opencode or any CLI · Local-first, nothing leaves your machine	Feature grid, comparison page

Vocabulary

Use	Instead of
stage, handoff, gate	step, phase, checkpoint, approval flow
task, board, pipeline	ticket, kanban, workflow (except when explaining Jira parity)
agent, AI CLI	bot, copilot, assistant (except "AI Assistant" nav label in product)
approve, review, sign off	validate, confirm, accept
on your machine, in git	locally, offline, secure

Logo system

The mark is an **A** built from two strokes: a blue leg that hooks at the foot and rises to the apex, and a straight purple leg falling from the apex. It is both a letter and a rising line (ideas → impact). The wordmark is Inter Bold, tracking -3%.

Primary (recommended)
Mark + wordmark, horizontal.

Mark only
Favicons, avatars, small UI.

App icon
Mark on Dark Navy rounded square.

Monochrome
Stacked, one colour. Print, embossing, favicons on colour.

On dark wordmark = Light #F8FAFC

On light wordmark = Dark Navy #0B1120 ; tagline under wordmark in Slate

Vector lockup (SVG) logos/aira-lockup-horizontal-on-light.svg

Vector files shipped with this document

File	Use
logos/aira-mark.svg	Gradient mark, 64×64 viewBox. Inline in HTML or use as <code></code> .
logos/aira-mark-mono.svg	Single-colour mark using <code>currentColor</code> . Header on coloured backgrounds, print.
logos/aira-lockup-horizontal-on-light.svg / -on-dark.svg	Mark + "Aira" wordmark. Text is live (Inter must be loaded).
logos/aira-app-icon.svg + png/aira-app-icon-{256,512,1024}.png	Desktop app icon (Electron build resources, macOS/Windows/Linux).
logos/favicon.svg + png/favicon-{32,64,180}.png	Browser favicon, Apple touch icon, PWA icon.
logos/png/aira-mark-{512,1024}.png	Raster mark on transparent, for social avatars and OG images.

Rules

Clear space. Keep a margin equal to the mark's stroke width ($\approx 1/6$ of mark height) on all sides. Nothing enters this zone.

Minimum size. Mark: 16 px (favicon). Primary lockup: 24 px high on screen, 8 mm in print. Below that, use mark only.

Backgrounds. Gradient mark on Light, white, or Dark Navy only. On busy imagery use the monochrome mark in Light or Dark Navy.

Never: stretch, rotate, outline, add drop shadows, recolour the gradient, place the mark on Purple or Primary Blue fills, put the wordmark in another typeface, or pair the mark with "Bridza".

Jira distance. The mark must never mimic Atlassian's blue diamond or the Jira logotype. Keep the hooked left leg; it is the distinguishing feature.

Colour

Six brand colours from the board. Blue leads, Purple accents, Cyan signals success and "AI is working". Dark Navy is the product's default ground; Light is the marketing ground.

Primary Blue
#4F7BFF

Purple
#8B5CF6

Cyan
#06D6A0

Dark Navy
#0B1120

Slate
#64748B

Light
#F8FAFC

Brand gradient

`linear-gradient(90deg, #4F7BFF 0%, #8B5CF6 100%)` . Used on the primary button, the mark, the hero highlight word, and the wave motif. Angle 135° when applied to large surfaces.

Roles and the CSS token mapping

The app already runs on tokens in `src/index.css` (Tailwind v4 `@theme`). Replace the violet values with these. Names stay the same so no component changes.

Token	Dark (default)	Light (<code>data-theme="light"</code>)	Role
<code>--color-base</code>	#0B1120 Dark Navy	#FFFFFF	Page background
<code>--color-surface</code>	#111A2E	#F8FAFC Light	Cards, sidebar, inputs
<code>--color-line</code>	#1E293B	#E2E8F0	Borders, dividers
<code>--color-ink</code>	#F8FAFC Light	#0B1120 Dark Navy	Primary text
<code>--color-ink-dim</code>	#94A3B8	#475569	Secondary text
<code>--color-ink-faint</code>	#64748B Slate	#94A3B8	Placeholders, tertiary
<code>--color-accent</code>	#4F7BFF Primary Blue	#4F7BFF Primary Blue	Links, focus ring, active nav
<code>--color-accent-2</code> (new)	#8B5CF6 Purple	#8B5CF6 Purple	Gradient end, AI highlights
<code>--color-accent-soft</code>	#1E2A5A	#DBE4FF	Chip and pill backgrounds
<code>--color-on-accent</code>	#FFFFFF	#FFFFFF	Text on accent/gradient
<code>--color-success</code> (new)	#06D6A0 Cyan	#06D6A0 Cyan	Done state, positive deltas, "AI ready"

Accessibility. Primary Blue on white is 4.6:1 (AA for text ≥ 14 pt bold or 18 pt). For body-size links on white use `#3B63E6` . Light on Dark Navy is 17:1. Never set body text in Purple or Cyan.

Scale (web, 16 px base)

Role	Size / line	Weight	Tracking	Tailwind
Display (hero H1)	60 / 64 px (mobile 40 / 44)	700	-0.03em	text-6xl font-bold tracking-tight
H2	36 / 40	700	-0.02em	text-4xl font-bold tracking-tight
H3	24 / 32	600	-0.01em	text-2xl font-semibold
Lead	18 / 28	400	0	text-lg text-ink-dim
Body	16 / 24	400	0	text-base
Small / caption	14 / 20 · 12 / 16	500	0	text-sm · text-xs
Eyebrow / label	12 / 16	600	+0.06em uppercase	text-xs font-semibold uppercase tracking-wider
Code	13 / 20	400	0	font-mono text-[13px]

Both families are already declared in `src/index.css` (`--font-sans` , `--font-mono`). Load Inter 400/500/600/700 and JetBrains Mono 400/500 from Google Fonts or self-host in `public/fonts/` . Wordmark uses Inter 700 at -3% tracking.

UI components & tokens

Reference panel from the brand board.

BUTTONS

Text link →

Variant	Spec
Primary	Brand gradient fill, white text, 600 weight, radius 8 px, padding 10×18 px, trailing arrow optional. Hover: +6% brightness. Focus: 2 px Primary Blue ring at 40%.
Secondary	1 px Slate/30 border, transparent fill, ink text. Hover: border Primary Blue.
Text link	Primary Blue, 500 weight, arrow suffix. Underline on hover only.

INPUTS

Radius 8 px, 1 px line border, 12 px horizontal padding, 40 px height. Search has a leading magnifier icon. Focus: Primary Blue border + 3 px ring at 25%.

SELECT, TOGGLE, CHECKBOX, RADIO

Toggle track 40×22 px, on = Primary Blue. Checkbox 16 px, radius 4 px, checked = Primary Blue with white tick. Radio 16 px, checked = Primary Blue ring.

AI BANNER

Surface tint #EEF2FF (light) / #141C3A (dark), sparkle icon in Primary Blue, title 600, one line of Slate body, dismiss x. Copy example: "Let AI plan, assign and move your work forward."

Radii, spacing, elevation

Token	Value
Radius: control / card / modal / pill	8 px / 12 px / 16 px / 999 px
Spacing scale	4, 8, 12, 16, 24, 32, 48, 64 px
Shadow (light only)	0 1px 2px rgb(11 17 32 / .06), 0 8px 24px rgb(11 17 32 / .08) ; dark mode uses borders instead of shadows
Aura background	Keep .bg-aura ; accent radial becomes Primary Blue → Purple at 20% over base

Iconography & illustration

Reference panel from the brand board.

ICON STYLE

Outline icons, 1.75 px stroke, round caps and joins, 24 px grid, Dark Navy on light / Light on dark. This matches **Lucide** almost exactly; use Lucide (`lucide-react`) as the icon set. Board set: home, list-checks, calendar, search, zap, bell, user, trending-up, settings, sparkles, link, maximize, message-square, file-text, cloud, more-horizontal.

AI SIGNIFIER

A four-point sparkle (`sparkles`) in Primary Blue marks anything the agent does. It is the only icon allowed to be filled with brand colour.

ILLUSTRATION STYLE

Flat, rounded, two-tone: Primary Blue / Purple objects on Light or Dark Navy cards, Cyan for one accent element, subtle 1 px Slate strokes. No gradients inside illustrations except the brand gradient on a single hero object. Subjects: boards, cards, the robot mascot (friendly, rounded, blue face), flow nodes and connectors.

MASCOT

The robot is for onboarding, empty states and the "AI Assistant" nav item only. Never on the landing hero, never in the logo lockup.

Applications

Product UI (dark). Sidebar: Home, Projects, AI Assistant, Issues, Reports, Settings. Greeting card with sparkle + "Ask Aira anything..." input. Quick actions: Create new issue, Summarize updates, Plan a sprint. In Aira's real app the nav is Board / Pipelines / Tasks / Plan / Settings; keep the visual treatment, not the labels.

App icons & favicons. Dark Navy tile with gradient mark (default), Light tile with gradient mark (light-mode alternative), Primary Blue tile with white mark (badge), and bare mark for 16 px favicons.

Landing hero (dark). Mark + wordmark, "From ideas to impact." with "impact" in gradient, "Jira for the AI era", wave motif in blue → purple, footer rhythm Plan · Track · Ship.

DESKTOP APP ICON

Use `logos/aira-app-icon.svg` → export 1024 px PNG → `build/icon.png` (electron-builder derives .icns and .ico). Corner radius is 22% of the side; macOS applies its own mask.

FAVICON

`logos/favicon.svg` replaces `public/favicon.svg`. Add `png/favicon-180.png` as `apple-touch-icon`.

OG / SOCIAL IMAGE (1200×630)

Dark Navy ground, mark + wordmark top-left, "From ideas to impact." as headline, "Jira for the AI era" beneath, wave motif bottom-right. Build from the hero crop until a dedicated export exists.

IN-APP BRAND

Sidebar header: 20 px mark + "Aira" in Inter 600. Replace the current `└ Bridza` text brand. Keep the pulse animation on the mark.

Landing page copy (ready to ship)

Exact strings for `src/pages/App.tsx` , `src/pages/Download.tsx` and `index.html` . Copy verbatim; do not paraphrase.

Header

Element	Copy
Brand	[mark] Aira
Nav links	Download · Open the app · GitHub · by erluxman ↗

Hero

Element	Copy
Eyebrow pill	Jira for the AI era
H1	From ideas to impact. (<i>"impact" gets the gradient text class</i>)
Subhead	Aira is project management for the AI era. Agents do the work in small, git-backed stages. You approve every handoff.
Primary CTA	Download for macOS (<i>OS-detected: "Download for Windows", "Download for Linux"; fallback "Download"</i>) → <code>/download</code>
Secondary CTA	Open the app → <code>/app</code>
Under CTAs	macOS · Windows · Linux · Free and open source (MIT)
Rhythm strip	Plan · Track · Ship

Section: How it works (three steps, replaces "Coming soon" + waitlist)

Step	Copy
Section title	One task. Small stages. Real gates.
1 · Plan	Describe the task. Drop an idea in the inbox. Aira gives it a ref, a branch and a pipeline: engineering, brand, video, research, or one you define.
2 · Track	Agents run each stage. Every stage reads only the previous stage's outputs, runs your AI CLI under its own prompt, and commits one small diff.
3 · Ship	You approve every handoff. Review the diff, flip Automate when you trust a stage, and finalize to merge into main.

Section: Feature grid (six cards, replaces FEATURES in src/data/content.ts)

Title	Body
Stages are pure functions	A stage's input is only the previous stage's outputs, never the whole brief. Every review is one focused diff.
Git is the database	Each task is a branch and a worktree. Runs commit as they go. Your working tree and HEAD are never touched.
Human gate by default	Every stage waits for you until you flip Automate. Failures halt even automated stages.
See where time and money go	Time, agent, model and cost are tracked per stage, so the bottleneck is visible.
Bring your own AI CLI	Runs Claude Code, opencode, or any tool on your PATH. Swap models without rewiring.
On your machine	Aira is a desktop app that drives git and your local CLIs. Nothing leaves your repo.

Section: Why "Jira for the AI era"

Tickets are still tickets. The difference is who does the work and how a human signs off on it. Aira borrows what Jira taught everyone: tasks, boards, stages, refs and a branch per task. It changes the assignee. An agent does the work in stages you can review, and you gate every handoff.

Final CTA

Element	Copy
Title	Ship work you can actually review.
Body	Free, open source, runs on macOS, Windows and Linux.
CTA	Download Aira

Footer

Legal notes

Trademark. "Aira" is one letter from "Jira", in the same product category, paired with a slogan that names Jira. Comparative slogans that mention a competitor are generally permitted; a near-identical name in the same category is a separate and larger risk (likelihood of confusion). "Aira" is also in use by unrelated brands (visual-interpreting service, wireless charging). **Recommendation:** use "Jira for the AI era" as a positioning frame in conversation, press and comparison pages rather than as a registered tagline, and obtain a trademark clearance opinion before public assets ship. The requester has chosen this direction; this document delivers it and flags the risk once.

Attribution

Jira is a trademark of Atlassian Pty Ltd. Aira is not affiliated with or endorsed by Atlassian. Add this line to the landing page footer and the README when the "Jira for the AI era" frame is used publicly.

Fonts

Inter (SIL Open Font License) and JetBrains Mono (SIL OFL). Both may be self-hosted and redistributed with the app.

Document history

Version	Date	Change
1.0	2026-09-21	Initial guidelines from the brand board and positioning.md.
